# Self declared Environmental Claim, Rapid Eco Range

*In accordance with ISO14021*

## Rapid Eco

All products, including packaging, that are labelled with the Rapid ECO mark fully comply with the below mentioned minimum requirements.

### Product Requirement: Parts made of 100% Post Consumer Plastic

All parts and components, constituting the products within the Rapid ECO Range that are declared to be made from recycled material (plastic covers and outer casings) are made from 100% post consumer recycled plastic waste. The waste originates from electric or electronic equipment and is being recovered at the facility of our provider's supplier. The polymer manufacturer has identified and secured the sourcing of the needed material post consumer waste thanks to the European WEEE Directive, "Waste of Electrical and Electronic Equipment". The manufacturer purchases raw materials from different recycling systems, all connected to the WEEE directive. The raw material is processed as plastic rich shredder residue.

The total share of post consumer material in the different products within the Rapid ECO Range can be given upon request.

### Product Requirement: Designed for disassembly

Where the "Designed for Disassembly" claim is made, product components weighing >15g, are separable manually or with the use of a standard T10 torx screwdriver. The separated materials (metal or plastic with the correct type-label) can be recycled if a recycling system is available.

### Packaging Requirement: Recycled cardboard

The packaging is made of recycled cardboard. The minimum amount of recycled material in the packaging is 75%.

### Packaging requirement: Soy based printing

The packaging is printed with ink that is based on refined soy oil. The minimum rate of soy oil is 20%.
